

### Headlines about us

Pace Insights is a world-class sports engineering consultancy.

We build software analytics tools, instrumentation and training equipment that is used by 30+ high-performance sports to enhance their performance.

26 of our customers were in Rio this summer. 25 got Gold medals.

- We're about the pursuit of excellence.
- We're about winning.
- We're small.
- We're friendly.
- We're obsessive.
- We're free to choose our technology - including building our own.
- We're asked to do things no-ones ever done before - that's hard sometimes.
- We're changing a global industry.
- We're just at the beginning.
- We need your talent to grow.

### Desired Skills and Experience

We're looking for a Graduate Performance Engineer to work closely with the support teams for some of the highest profile Professional & Olympic Sports organisations in the UK.

We've been tasked with helping them improve their tools, working practises and use of objectivity in decision making.

Your role will be to determine requirements, propose solutions and then deliver on them, to ensure the teams achieve their objectives. This requires a blend of at the minimum the following skills:

- With a background in motorsports or sports engineering you'll be comfortable with data analysis, metric development and complex problem solving.
- You'll be highly competent in Excel (inc VBA), able to write complex algorithms and have a strong appreciation for software development in general (inc simulation and ideally Python).
- You will have had practical experience of installing and using data logging systems and instrumentation systems. Acquiring, processing and handling mathematical data is second nature to you.
- You'll be highly competent CAD user, able to design novel new products to customer specifications - seeing these design through to manufacture and installation where required.
- Visually everything we do is designed to have impact and professionalism. We will guide and teach these skills but having a critical eye and a strong appreciation for design and, specifically, information design and data visualisation practises of the kind seen in motorsports pitwall strategy/analysis tools, would be highly beneficial.

### The deal

Apart from a great bonus package and generous holiday allowance, you will be encouraged to:

- Work between home and our midlands based office – from within the UK (ie Brighton - London - Oxford - Birmingham - Manchester/Leeds/Sheffield)

## Performance Engineer

- Take a step towards client product management so you get kudos for your projects
- Attend a variety of events to network and enhance your professional development
- Balance working on our research or personally directed projects

### **Next Steps**

If you have made up your mind to make an application please send your CV and a short covering letter to [jobs@paceinsights.com](mailto:jobs@paceinsights.com) outlining the value you can bring to Pace Insights in the first 12 months.
